
Invivo Study of Hylunia's Beyond Complex C on Collagen Synthesis

A study was performed on two subjects, one was a 60 year old and the other was a 52 year old. An Opti-scan device was used in the study. Opti-scan devices use different wave lengths and can take pictures of 64 layers of the skin. Pictures were taken of the forehead before and after treatment with Hylunia's Beyond Complex C. As shown in the photographs below, the 52 year old subject's wrinkle was seen up to 24 layers before treatment. The wrinkle was reduced to 16 layers after treatment for 12 days with Beyond Complex C. When comparing the 15th layer, it could be seen that the wrinkles have disappeared after treatment. A 15% wrinkle reduction was achieved in 12 days, indicating collagen synthesis.

The 60 year old subject's wrinkle was reduced 25% after using Beyond Complex C. Prior to treatment the wrinkles were seen up to 35 layers. After 12 days of treatment wrinkles were reduced to 19 layers. Compare layers 15 in photo, before and after treatment with Hylunia's Beyond Complex C.

Optiscan picture of untreated forehead area, wrinkle is seen up to 24 layers on day 1.

Optiscan picture of forehead area treated with Beyond Complex C, wrinkle is reduced from 24 layers to 16 layers in just 12 days.
